

# HW 1: Markdown

Stat 133, Spring 2023

## Introduction

The purpose of this assignment is to work with an R Markdown (`Rmd`) file and practice writing content using markdown syntax, and a bit of math equations with latex syntax. Because you will be using R markdown files, aka `Rmd` files, throughout the rest of the course, the sooner you get familiar with this syntax, the better.

*Important Note:* This HW is the simplest and easiest assignment of the semester. Do not expect the rest of HW assignments to be like this one.

## General Instructions

- Use an `Rmd` (R markdown) file, and name this file as `hw1-first-last.Rmd`, where `first` and `last` are your first and last names (e.g. `hw1-gaston-sanchez.Rmd`).
- You will have to knit your `Rmd` file into an HTML file.
- Submit both your `Rmd` and HTML files to bCourses (in the associated assignment submission).
- Please note that if you submit the incorrect files, you will receive no credit.
- Because this is the first HW, we are willing to make a one-time exception if you don't submit both files. However, please keep in mind that for future assignments, only submitting one of the files will result in an automatic 20% deduction.

Here are some useful resources that you can look at to complete this assignment:

- Markdown reference: <http://commonmark.org/help/>
- RStudio has a very comprehensive R Markdown tutorial: <http://rmarkdown.rstudio.com/>
- Mastering Markdown: <https://guides.github.com/features/mastering-markdown/>
- Adam Pritchard's Markdown Cheatsheet: <https://github.com/adam-p/markdown-here/wiki/Markdown-Cheatsheet>
- RStudio cheatsheet: <https://www.rstudio.com/wp-content/uploads/2015/02/rmarkdown-cheatsheet.pdf>

## 1) Harry Potter Character

Visit *Harry Potter Wiki* [https://harrypotter.fandom.com/wiki/Main\\_Page](https://harrypotter.fandom.com/wiki/Main_Page) and choose one of the characters (e.g. [Albus Dumbledore](#)).

Use markdown syntax to write the following about the character you chose (do NOT use Albus Dumbledore for your submission):

- Include an image of the character.
- Include one of the character's quote using a markdown blockquote.
- Use a markdown table with two columns to include things like blood status, marital status, title, species, etc.

*Here's some sample content:*

Figure 1: Albus Dumbledore

A quote by Albus Dumbledore:

“I had proven, as a very young man, that power was my weakness and temptation. I was safer at Hogwarts. I think I was a good teacher.”

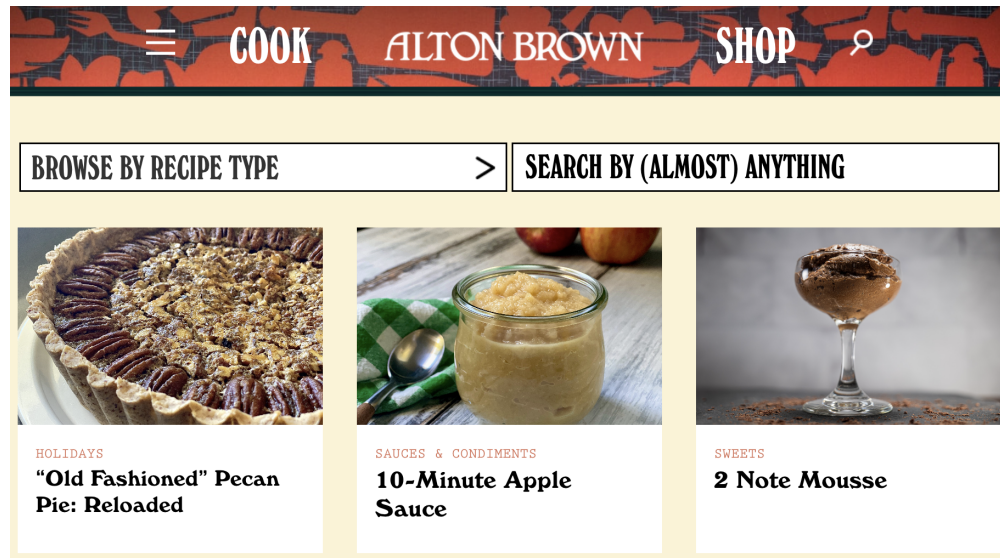

Description	Value
Blood status	Half-blood
Marital status	Single
Title	Professor
Species	Human

*More instructions in the next page*

## 2) Cooking Recipe

Visit **Alton Brown's** cooking recipes (<https://altonbrown.com/cook/>) and choose one recipe, e.g. *All-American Beef Taco*

<https://altonbrown.com/recipes/all-american-beef-taco/>

- Use different headers (e.g. #, ##, ###) to denote the name of the chosen meal, the list of ingredients, the cooking steps, etc.
- Include an image to show the appearance of the meal. You will need to either download an image of the recipe, or take a screenshot of it, and then use the local image file to be embedded in your document.
- Include a hyperlink of the recipe.
- Use an **unordered** list (of bullets) to list the ingredients.
- Use another unordered list to list any “special” kitchen tools that are needed.
- Write paragraphs to describe the steps of the recipe. Also, make sure to use markdown syntax to format text in italics, and bold when appropriate.
- Include a footnote. See the markdown cheatsheet (page 2) available in bCourses (folder **Files**) to learn how to insert footnotes.

*More instructions in the next page*

### 3) Euclidean Distance

Visit the wikipedia page for the Quadratic Equation:

[https://en.wikipedia.org/wiki/Quadratic\\_equation](https://en.wikipedia.org/wiki/Quadratic_equation)

Use markdown syntax, as well as latex syntax for math symbols, to replicate the text of the definition for the **Quadratic equation** (see screenshot below):

**Quadratic equation** No need to include hyperlinks 🌐 81 languages

Article Talk Read Edit View history

From Wikipedia, the free encyclopedia

*This article is about algebraic equations of degree two and their solutions. For the formula used to find solutions to such equations, see [Quadratic formula](#). For functions defined by polynomials of degree two, see [Quadratic function](#).*

In algebra, a **quadratic equation** (from Latin *quadratus* 'square') is any equation that can be rearranged in standard form as<sup>[1]</sup>

$$ax^2 + bx + c = 0,$$

where  $x$  represents an [unknown](#) value, and  $a$ ,  $b$ , and  $c$  represent known numbers, where  $a \neq 0$ . (If  $a = 0$  and  $b \neq 0$  then the equation is [linear](#), not quadratic.) The numbers  $a$ ,  $b$ , and  $c$  are the [coefficients](#) of the equation and may be distinguished by respectively calling them, the *quadratic coefficient*, the *linear coefficient* and the [constant coefficient](#) or *free term*.<sup>[2]</sup>

The values of  $x$  that satisfy the equation are called [solutions](#) of the equation, and [roots](#) or [zeros](#) of the [expression](#) on its left-hand side. A quadratic equation has at most two solutions. If there is only one solution, one says that it is a [double root](#). If all the coefficients are [real numbers](#), there are either two real solutions, or a single real double root, or two [complex](#) solutions that are [complex conjugates](#) of each other. A quadratic equation always has two roots, if complex roots are included; and a double root is counted for two. A quadratic equation can be [factored](#) into an equivalent equation<sup>[3]</sup>

$$ax^2 + bx + c = a(x - r)(x - s) = 0$$

where  $r$  and  $s$  are the solutions for  $x$ .

The [quadratic formula](#)

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

expresses the solutions in terms of  $a$ ,  $b$ , and  $c$ . [Completing the square](#) is one of several ways for deriving the formula.

Solutions to problems that can be expressed in terms of quadratic equations were known as early as 2000 BC.<sup>[4][5]</sup>

Only consider the text within the dashed rectangle

No need to include footnotes

To write all the three equations displayed in the screenshot—as well as the rest of math symbols scattered in the text—you will have to use latex syntax. Here are a couple of resources about writing math symbols with Latex notation:

- [https://www.sharelatex.com/learn/Mathematical\\_expressions](https://www.sharelatex.com/learn/Mathematical_expressions)
- <https://en.wikibooks.org/wiki/LaTeX/Mathematics>

If you feel the Quadratic equation is not enough, feel free to find other math equations and formulas to play with.

*More instructions in the next page*

## 4) Data Dictionary

Suppose we are interested in collecting data about water bottles sold by the American outdoor retailer REI. An example of this kind of item, shown in the image below, is the *Hydro Flask water bottle with flex cap, 40 fl. oz.*

<https://www.rei.com/product/169850/hydro-flask-wide-mouth-vacuum-water-bottle-with-flex-cap-40-fl-oz>

### Technical Specs

<b>Best Use</b>	Multisport
<b>Liquid Capacity (L)</b>	1.14 liters
<b>Liquid Capacity (fl. oz.)</b>	40 fluid ounces
<b>Dimensions</b>	Unavailable
<b>Water Bottle Material</b>	Stainless Steel
<b>BPA Free</b>	Yes
<b>Insulated</b>	Yes
<b>Bottle Opening</b>	Wide
<b>Cap Type</b>	Screw Cap
<b>Weight</b>	1 lb. 2 oz.

To be more specific, pretend we are interested in collecting data based on the technical specifications (e.g. “Best Use”, “Liquid Capacity”, “Dimensions”, etc)

Assume that you had to create a data dictionary for this hypothetical *Water Bottles* data set. Using markdown syntax, write content for an associated data dictionary (i.e. data codebook). In other words, include:

- name of variables (as they would appear in the data file)
- description of variables
- units of measurement (if applicable)
- recommended data types (e.g. logical, integer, double or real, character)
- how missing values would be encoded
- the source of the data
- mention any other details that you consider important for any user of the data
